Problem statement:-Farmer Crop Insurance Claim Tracking System – Bihar

1.Current Limitations :-

While the current prototype successfully structures the reporting process, several limitations are acknowledged:

- **Lack of Digital Tracking**
  - Farmers cannot check their claim status online.
  - No centralized dashboard for claims.
- **Manual Documentation**
  - All documents are submitted physically.
  - Data is stored in paper registers.
- **Repeat Office Visits**
  - Farmers must travel repeatedly just for status updates.
  - This wastes time and money, especially in rural areas.
- **Poor Communication**
  - Farmers don't receive automated updates.
  - Officers must call farmers manually.

2.Technical Limitations:-

These are constraints that affect **your proposed software solution**:

- **Limited Real-Time Communication**
  - SMS integration may be limited by third-party APIs.
  - Free SMS gateways may not guarantee delivery.
- **Limited AI/Automation**
  - Document verification is manual.
  - No automatic OCR or AI-based fraud detection initially.
- **No Mobile App (Initial Phase)**

- The first version is web-based only.
- A dedicated mobile app is future scope.

➢ **Government Integration Pending**

- Integration with official PMFBY API or government systems is not available initially.
- Approval process may still need some manual government verification.

3.Future scope:-

➢ **Mobile Application (Android + iOS)**

- Farmer-friendly app with offline caching.
- Smart camera capture for documents.

➢ **AI-Based Document Verification**

- OCR to extract text from uploaded documents.
- Auto-classification and validation of proof.

➢ **Geo-Tagged Field Inspection**

- Use GPS location for field verification.
- Faster and more accurate damage assessment.

➢ **Satellite & Weather Data Integration**

- Automatically detect flood/drought using real weather APIs.
- Trigger claims based on satellite/weather conditions.

➢ **SMS & Push Notifications**

- Integrate a paid SMS gateway for reliable message delivery.
- Implement app push notifications for faster alerts.

➢ **KPI Dashboard & Analytics**

- Month-wise claim trends
- District performance heatmaps
- Claim rejection analysis
